INVESTMENT FOCUS

The Fund aims to protect your capital against financial market turbulence. The Fund also invests mainly in fixed- or floating-rate government or corporate bonds. A smaller portion of the Fund's assets (at most 25%) is invested in equities. This balance can be achieved either directly or by investing in other funds that themselves invest in bonds or equities. Most of the issuers of these bonds and equities listed on the stock exchange or traded on another regulated market are situated in an OECD member state.
The Fund's investment strategy is based on analysing the expected risk and return for each category of instrument, type of issuer and geographical area. The Fund then selects companies with solid fundamentals and good visibility that are traded on the market at a price that the Fund deems attractive.
The Fund may enter into futures or options contracts (derivatives) that are listed on the stock exchange or traded over the counter. The purpose of these derivatives is to both optimise portfolio management and to protect its value against an unfavourable change on the financial markets.
This is an actively managed Fund without a benchmark. The manager can choose the composition of the portfolio but must adhere to the Fund's investment policy and objectives.
This not a distribution unit class. All income from the Fund's investments is reinvested and incorporated into the value of your units.
You may sell units from this class on any bank business day in Luxembourg.
Recommendation: the Fund may not be suited to investors who wish to redeem within three years.
The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities. This sub-fund has been classified as compliant with article 6 of SFDR.
